FOOD DETAILS & NUTRIENT

If you enter the image of the food we can give you the list of nutrient values it has. we also provide a service that can tell you the list of ingredients just by entering the food name

13. APPENDIX

1. Introduction

1.1 Overview

As there is improvement in people's standards of living, obesity rates are increasing at an alarming speed, and this is reflective of the risks to people's health. People need to control their daily calorie intake by eating healthier foods. However, most of food packaging comes with nutrition labels, it's still not very convenient for people to refer.

Most people understand the repercussions of eating fast food but sometimes the repercussions are unexpected and may require the services of a personal injury lawyer. Most of my favorite foods cause weight gain and if eaten consistently, could lead to diabetes. In the last several years, there have been a handful of displeased fast-food eaters who took legal action against the fast-food chains to either make an easy buck or hold them accountable for their lousy products.

1.2 Purpose

The main purpose of this Web application is to help people know the nutrient value of the food they eat. This web app provides a service where the user can feed the food image/ food name/image URL and the app provides the nutrient value of the food. The user can also feed the daily consumption of food with time and date. Then he can access the food details whenever required. The nutrient details are also sent to the user mail.

This application can be used personally to take of ones health, recommended by hospitals or the doctors to track the user daily food consumption, We will know more about this further.

2. LITRATURE SURVEY

2.1 Existing problem

In this busy world people can't track the food they consume and it is difficult to find the nutrients of all the food they consume. Over consumption or under nutrition can lead to serious health issues. These may be calcium/iron/vitamin deficiencies or the over consumption of carbohydrates and sugar that causes obesity and diabetes. Which may further lead to serious health issues. There is urgent action required to maintain a balanced diet in order to have a good immunity.

2.2 Proposed solution

Our web app used the food image given by the user then processes that to the nutrient values of the food then displays to the user. these can reduce the user's effort to enter the food details. he can simply capture the food image and enter into the web app.

The user can enter the food details that he consumes daily on the basis of time and date of consumption. we then add the food details into the user table. the user can then go to the diary page and view the data entered by him between any particular dates. He can also view the aggregate nutrient details. We have provided an email service where users will get the aggregate nutrient details.

This application can be used on the recommendation of the doctor or the hospitals where one can track all the data that the patient consumed to track the nutrient details of the patient.

fig : Our services from dashboard page

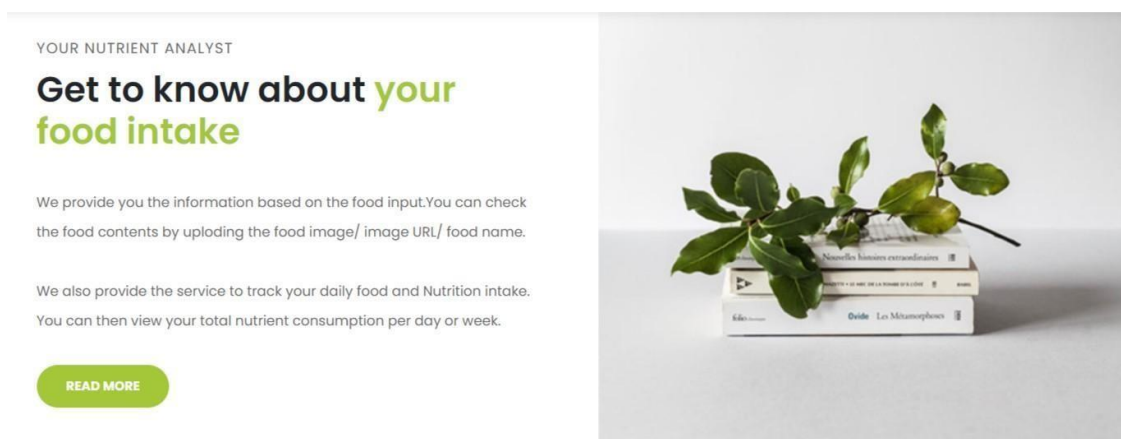

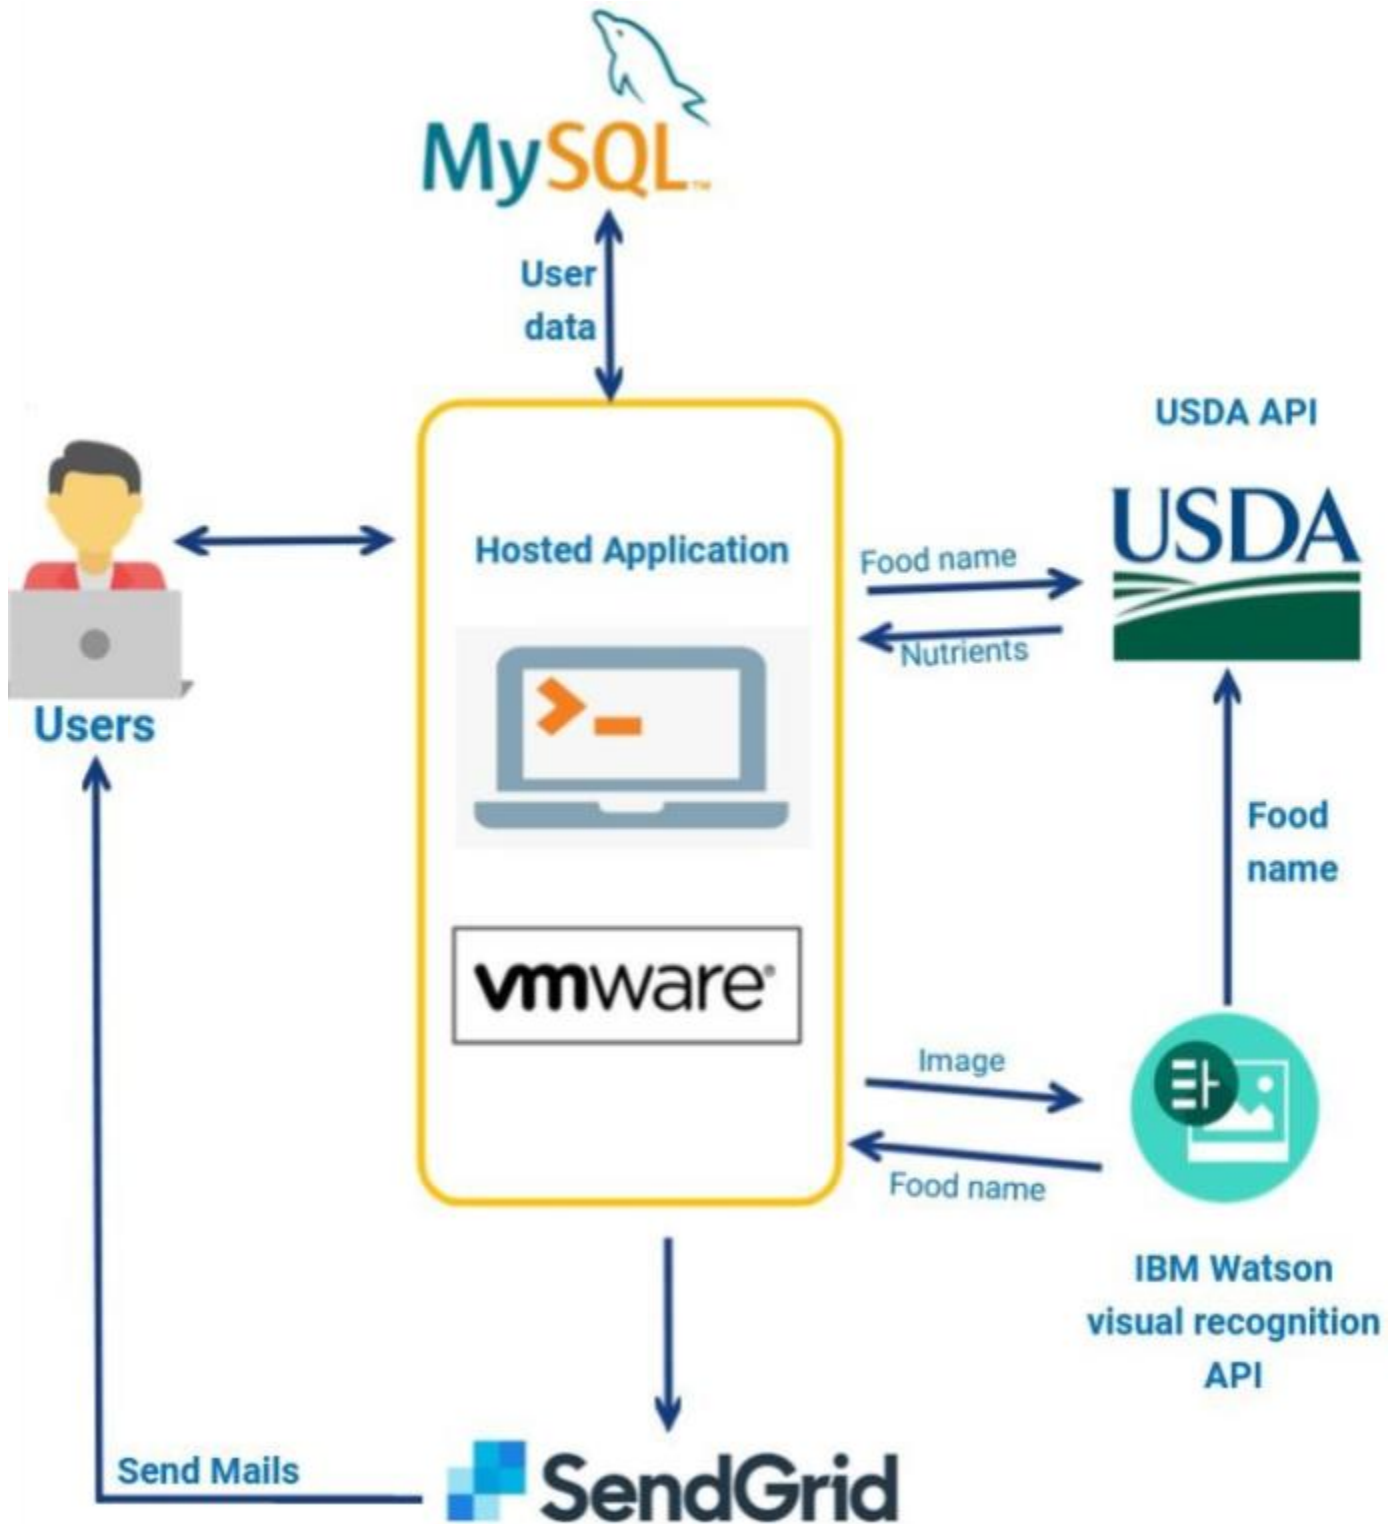

fig : 'About Us' page from web app

3. THEORITICAL ANALYSIS

3.1 Block diagram

3.2 Ideation and Brainstroming

This project aims at building a web App that automatically estimates food nutrients by the input image/name of the food. I have used the IBMs visual recognition-v3 Api to find the food by the given food image or the image URL.

Application then takes the processed data and then sends it to the USDA API which then estimates the nutrient values of the food and returns the nutrients and their nutrient value. Which we then process and store in the database if the user wants to enter.

I have used python for programming and HTML, CSS, JS for designing pages And SendGrid for email services.

3.3 Proposed Solution

With all the above factors I have included some more services that would be useful to the user. some of these are listed below.

- A demo service where the user can just enter the food name and the web app will tell the nutrients. This can be accessed without the registration whereas other pages can be accessed only after the user registration.

3.4 Empathy map

Empathy Map Canvas

Gain insight and understanding on solving customer problems.

1

Build empathy and keep your focus on the user by putting yourself in their shoes.

4. REQUIREMENT ANALYSIS

While analyzing the problem, I found that as people in their busy life can't track the nutrients they consume, and can't find the nutrients of the

food.Because it impacts badly on their health.

4.1 Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through E-mail and Phone number
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	User Profile Completion	Get personal details like height, weight, etc.
FR-4	Gather meal image	Upload photo Take live photo of the meal
FR-5	Display calorie information	Integrate Clarifai API to get name of the food Integrate Nutrition API (rapid API) to collect calorie information

4.2 Non-Functional Requirements

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Provide user friendly UI Simple and intuitive design
NFR-2	Security	Comprehensive authorization and authentication scheme for each system actor
NFR-3	Reliability	The system must perform without failure in 95 percent of use cases
NFR-4	Performance	The landing page supporting several users must provide 5 seconds or less response time
NFR-5	Availability	Uninterrupted services must be available all time except the time of server updation.
NFR-6	Scalability	Provide horizontal or vertical scaling for higher workloads

5. PROJECT DESIGN

5.1 Data Flow Diagram

Nutrition Assistant Application

5.2 Solution and Technical Attributes

fig : Output shown to the user.

- I have added a page COVID PRECATIONS.where user can get the information about the nutrients to consume in this pandemic according to the AYUSH Ministry.

fig : A screen shoot from Covid precaution page.

- I have added a ABOUT US page which gives information about our webpage. NUTRIENT page gives information about the nutrient details.

fig : 'Nutrients details' from home page

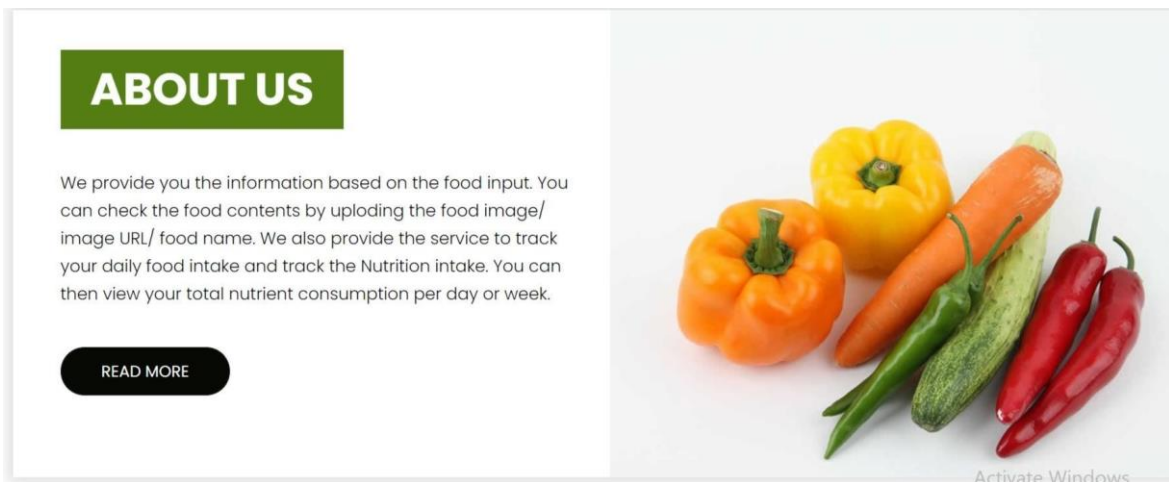

fig : 'About Us' from home page

- I have added the CONTACT US page from where the user can enter the Queries.

CONTACT US

The image shows a contact form titled "CONTACT US" in bold black text with "US" in green. The form is contained within a white box with a thin grey border. It features four input fields: "Your Name", "Email", "Phone Number", and "Message". The "Message" field is a larger text area. Below the fields is a green button with the text "SEND" in white. The background of the page has a soft, abstract design with yellow and orange shapes.

- I have added the email services using send grid. which sends the email to the user.the following are the email services.
 - As soon the user gets registered he will receive the mail.
 - If the user has forgotten the credentials he can get the user id and password to his mail.
 - Whenever the user watches his calorie consumption he get the nutrient details in his mail.
 - If the user uses our contact us page he gets the mail.

5.3 User Stories

Nutrition Assistant Application

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer	Registration	USN-1	As a user, I can register for the application by entering my Name, Age, Gender, E-mail, password, and confirming my password.	I can access my account / dashboard.	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application.	I can receive confirmation email & click confirm.	High	Sprint-1
	Profile updation	USN-3	As a user, I have to enter my height, weight and daily activity details.	I can update these information on Dashboard.	High	Sprint-1
	Login	USN-4	As a user, I can login to the application by entering E-mail and password.	I can access my account/ dashboard.	High	Sprint-1
	Dashboard	USN-5	As a user, I can upload or capture live image of the meal	I can get the nutritional value of that particular meal.	High	Sprint-2
		USN-6	As a user, I can track my daily calorie intake.	I can access my account/ Dashboard.	Medium	Sprint-2
Administrator	Maintain the Application	USN-7	Maintaining details for users.	I can access database.	High	Sprint-3

6.PROJECT PLANNING AND SCHEDULING

6.1 Sprint Planning and Estimation

Sprint	Functional Requirements (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	2	High	T.Archana G.Bavadarani S.Kanishma P.Maheswari
Sprint-1		USN-2	As a user, I will receive confirmation Email once I have registered for the application	1	High	T.Archana G.Bavadarani S.Kanishma P.Maheswari
Sprint-1	Login	USN-3	As a user, I can log into the application by entering Email and password	1	High	T.Archana G.Bavadarani S.Kanishma P.Maheswari

6.2 Sprint Delivery and Schedule

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 NOV 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 NOV 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 NOV 2022

Velocity:

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

8. TESTING

Title	Description	Date
Literature Survey & Information Gathering	Literature survey on the selected project & gathering information by referring the, technical papers, research publications	24 September 2022
Prepare Empathy Map	Prepare Empathy Map Canvas to capture the user Pains & Gains, Prepare list of problem statements	25 September 2022
Ideation	List the by organizing the brainstorming session and prioritize the top 3 ideas based on the feasibility & importance	20 September 2022
Proposed Solution	Prepare the proposed solution document, which includes the novelty, feasibility of idea, business model, social impact, scalability of solution, etc	19 September 2022
Problem Solution Fit	Prepare problem solution fit document	20 September 2022
Solution Architecture	Prepare solution architecture document	19 September 2022
Customer Journey	Prepare the customer journey maps to understand the user interactions & experiences with the application	03 October 2022

Nutrition Assistant Application

Functional Requirement	Prepare the functional requirement document	03 October 2022
Data Flow Diagrams	Draw the data flow diagrams and submit for review	03 October 2022
Technology Architecture	Prepare the technology architecture diagram	03 October 2022
Prepare Milestone & Activity List	Prepare the milestones & activity list of the project	22 October 2022
Project Development - Delivery of Sprint-1, 2, 3 , 4	Develop & submit the developed code by testing it	In Progress...

9.RESULT

This web app provides the food details if the food image/ URL/ Name is entered. It provides the nutrients involved in it and also the nutrient value.

The image shows three separate web forms arranged horizontally. Each form has a green icon at the top: a star for the first, a picture for the second, and a letter 'A' for the third. The first form is titled 'Please Enter the image url' and contains a text input field labeled 'image Url' and a blue 'ok' button. The second form is titled 'Please upload an image' and contains a 'Choose File' button, a file name '2-2-sweets-f...load-png.png', and a blue 'ok' button. The third form is titled 'Please enter the food name' and contains a text input field labeled 'enter food name' and a blue 'ok' button. All forms have a green header bar with the text 'FOOD SERVICES' and a navigation menu with links: 'Dashboard', 'About Us', 'Food Services' (highlighted), 'Daily Tracker', 'Personal Diary', and 'Logout'.

fig : Display of user food details

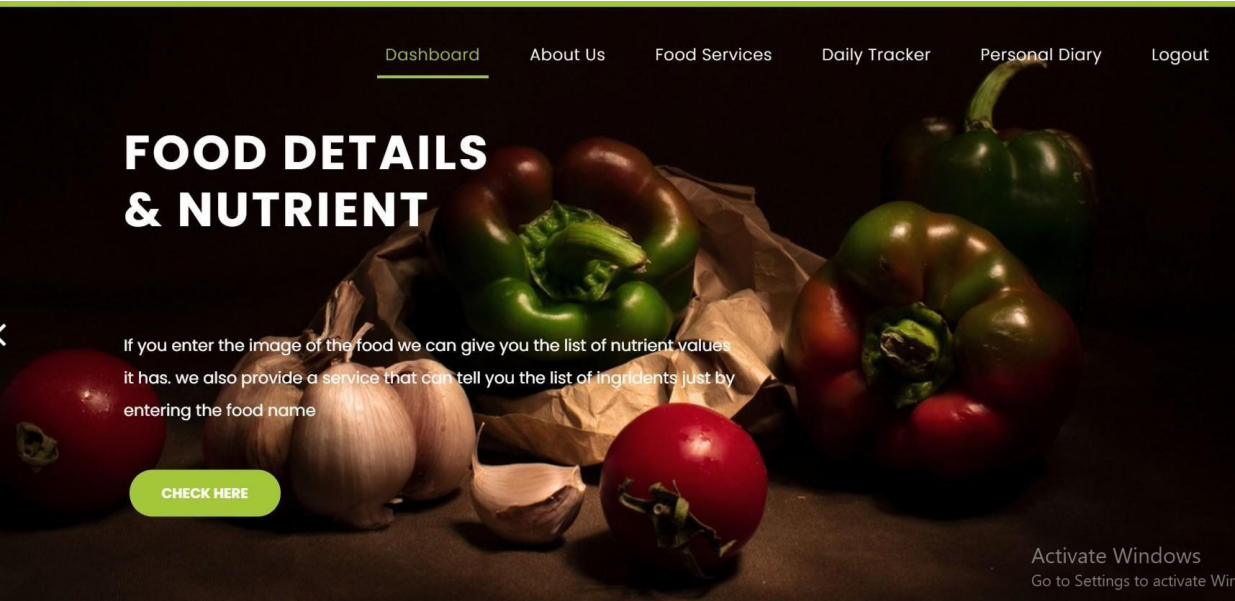

fig : Dashboard of the web app

Nutrition Assistant Application

fig : Mail received by the app regarding the nutrient information

10 ADVANTAGES AND DISADVANTAGES

10.1 Advantage

Our web app uses the food image given by the user then processes that to the nutrient values of the food then displays to the user. The user can enter the food details that he consumes daily based on time and date of consumption. The user can then go to the diary page and view the data entered by him between any particular dates. He can also view the aggregate nutrient details.

This application can be used on the recommendation of the doctor or the hospitals where one can track all the data that the patient consumed to track the nutrient details of the patient.

10.2 Disadvantages

As the food around the world is very diverse, it is difficult to recognize some of the local foods. Both the APIs are having a very wide range of food images. But its difficult to find all the food images.

In order to overcome the above disadvantages I have given the field where one can directly enter the food name. We then process the name to the nutrient values.

11. CONCLUSION

As there is improvement in people's standards of living, there is neglect in the proper balanced diet and this is reflective of the risks to people's health. People need to control their daily calorie intake by eating healthier foods.

My web app keeps the record of what the user eat and displays the nutrients he consumed which makes the user to find what nutrients he consumed in what amounts.

12. FUTURE SCOPE

As people are in this fast and busy world, it becomes important to track the food details. I have planed to add a feature where the user can set the goal of taking the nutrients per day / week. then our app tells whether he has reached

the goal.

I will also include the service where the user can update his weight and height based on which our app gives the Nutrients data that one needs to consume.

I have also planned to link the daily trackers in the mobiles like Google fit, from where we can get the calories lost and our web app give the data of nutrients to be consumed.

APPLICATIONS

This application has the following applications.

- The uploaded food image is processed and then its the nutrient value is displayed.
- The URL/The food name can also be given as food input.
- The user can track the daily intake of food
- User can track the nutrient values of the food that He consume.
- User can store the data in his table in the database.
- He can access the data whenever he wishes.
- Users can watch their aggregate nutrients consumed and also received the mail of the aggregate report.
- This application can be recommended by the doctor/ hospitals who wishes to track the food/nutrient consumption of the patient.

13.APPENDIX

- I have used IBM Watson Visual recognition v3 API for Food Model for food recognition. Where it take the food image/URL as input and give the food name as output.
- USDA API uses the food name given and then processes it to the nutrient list.
